QUALITY, SAFETY, ENVIRONMENT

At Talleres, we are committed to quality, safety, and environmental stewardship. We believe that safety is paramount in our daily operations—ensuring a secure environment and fostering a culture that prioritizes protection in all aspects under our control.

Quality is our competitive edge and our promise to our clients. Delivering work that exceeds our clients' expectations is our hallmark. However, in all our activities, we consistently consider the impact on the environment. We recognize that we are accountable for today's actions on future generations. As such, it is our responsibility to minimize our environmental footprint.

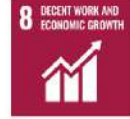

Talleres is proud to be certified under ISO 9001, 45001, 14001 and adheres to the highest standards in quality, occupational health and safety, and environmental management.

OUR MENTORS

Mentoring is one of the most significant roles one can assume in life. Sharing knowledge, experiences, life stories, and tools to foster learning adds immense value to a company. For this reason, at Talleres Industriales, we have established our Mentoring Academy, led by two distinguished professionals on our team, Guillermo Rosina and Ronaldo Brathwaite.

The Mentoring Academy is a dedicated institution within Talleres where each mentor engages individually with several mentees across various domains. This approach is designed to enhance both technical and interpersonal skills through practical teaching methods.

Mentoring is integrated into every facet of our operations, from the offices to workshops and on-site projects, ensuring mentees gain a holistic understanding of their strengths and areas for improvement.

We are proud to host two world-class mentors at our Academy and are delighted to see our young professionals learn from the best.

PANAMA THE PERFECT PIT STOP FOR REPAIRS

Panama emerges as the foremost destination in the Americas for comprehensive ship repair and marine solutions. At Talleres Industriales, our mission is to ensure vessel owners can maximize their downtime effectively. This period is crucial not only for fulfilling classification requirements but also for essential upgrades and safe equipment operations.

Recently, the owner of a Panamax container vessel selected Panama and specifically, Talleres Industriales for extensive afloat repairs. The project encompassed critical areas such as main deck structures, vessel cranes, cargo holds, hatch covers, and engine room machinery.

Positioned strategically at the Atlantic entrance of the Panama Canal, Talleres Industriales serves as a one-stop solution, combining expertly trained labor with full-scale equipment capabilities to handle any task professionally and safely.

For this particular project, we coordinated with our strategic partner, SSA Marine at the MIT Terminal, to secure a lay berth. This collaboration ensured that the repairs could proceed uninterrupted in a secure and well-suited location. Our team, comprised of qualified and certified professionals, was deployed swiftly with all necessary equipment, gear, and materials. This meticulous preparation allowed us to optimize the limited time allocated by the charterers to the vessel owners.

The scope of work included intricate tasks such as structural repairs to hatch covers, maintenance of the jib boom crane, comprehensive deck repairs, and specialized services in the engine room. Each task was executed to the highest standards of quality, with class approval. This approach not only leveraged the downtime but also mirrored the thoroughness of a dry dock experience, albeit at sea. At Talleres Industriales, we pride ourselves on executing complex logistics with precise coordination and flawless execution. Our ability to transform mandatory off-hire periods into productive and efficient repair sessions underscores Panama's status as the ideal repair hub in the Americas.

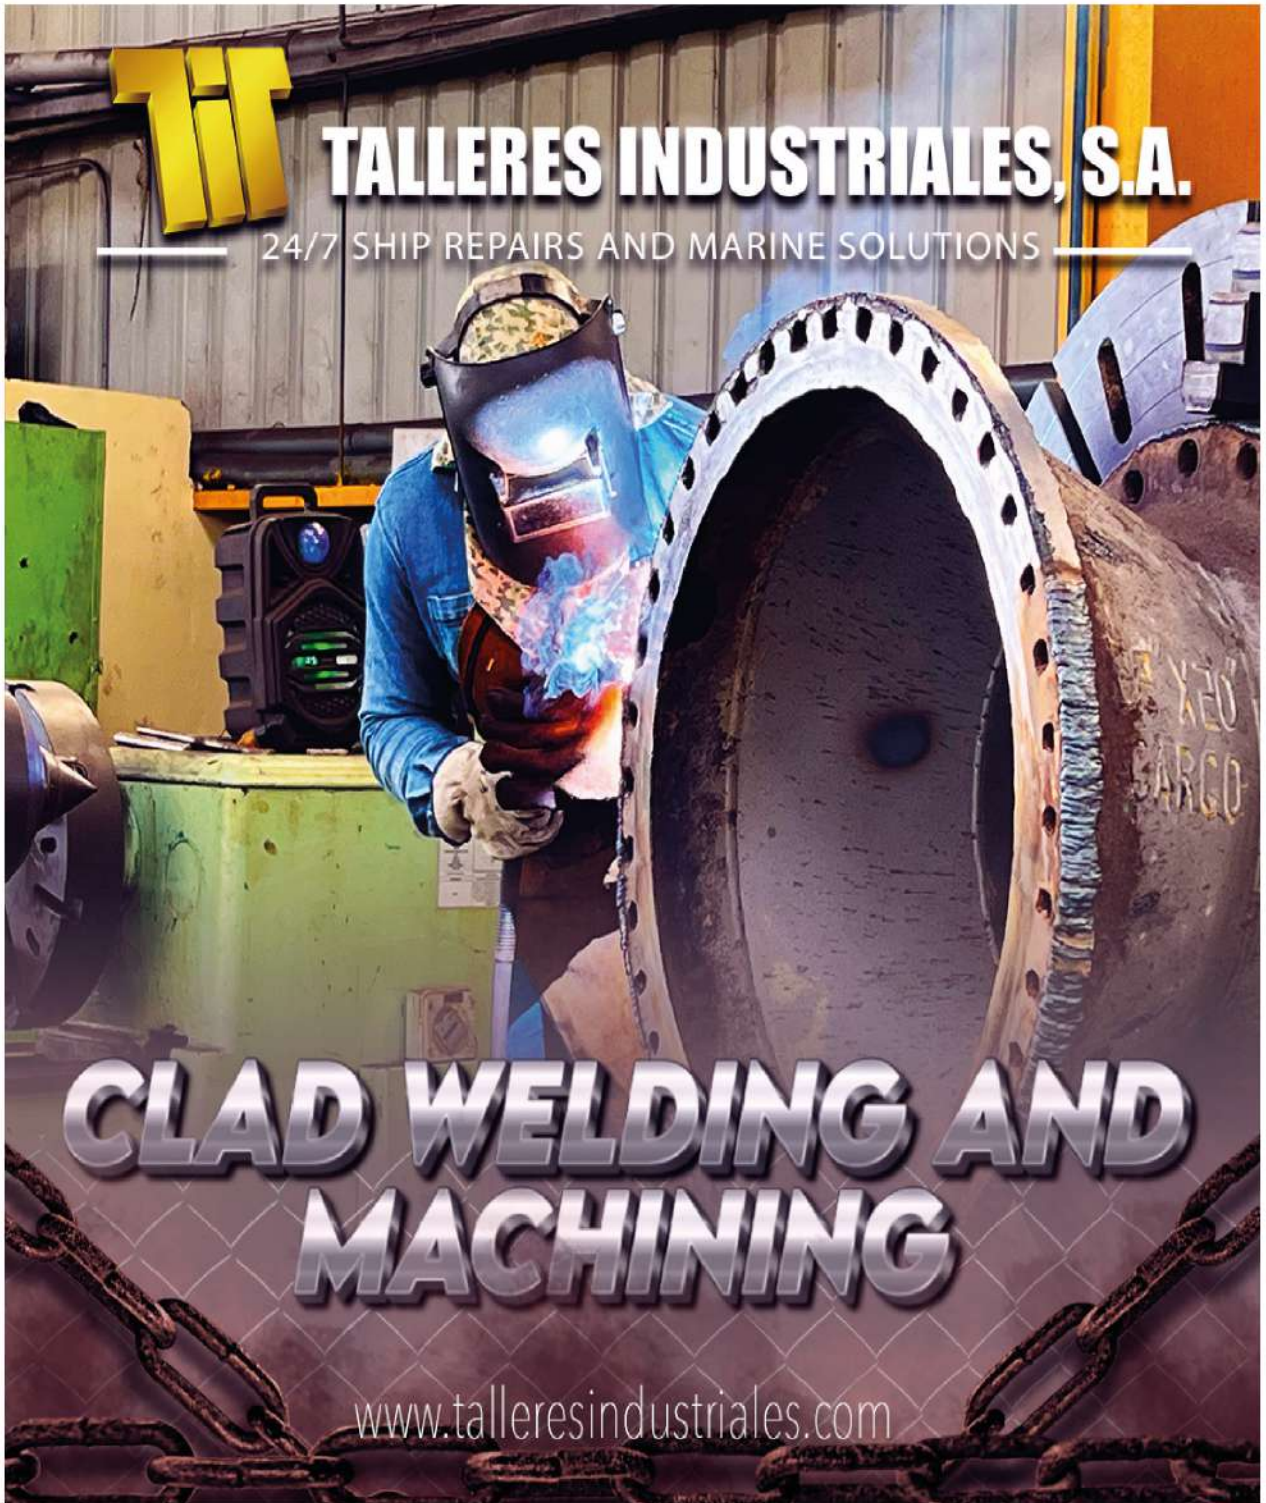

TALLERES IS A WAY OF LIFE: HENKO OMOTENASHI

In response to the challenges of 2025, we at Talleres Industriales have launched the Henko-Omotenashi internal program this March. This initiative is designed to provide practical and useful tools for our team and is divided into two distinct yet complementary parts.

Henko: This component promotes a spirit of innovation and adaptability, encouraging our team members to embrace transformation and recognize its positive impact on both their personal and professional lives. Henko aims to help individuals overcome limiting beliefs, strengthen their emotional intelligence, and view the future as a pathway filled with opportunities. By challenging our status quo, responding to market shifts, and fostering innovation, Henko reshapes our thinking.

Omotenashi: The second part of the program focuses on enhancing the experience of both internal and external clients. By being proactive, attentive to details, and creating an ecosystem where exceptional service is the standard, Omotenashi elevates every interaction. In the culture of Omotenashi, clients feel genuinely cared for, thanks to efficient processes, agile responses, and a customer-first mentality that emphasizes adherence to rules and procedures for performing outstanding and safe jobs. The Henko-Omotenashi program spans all levels of the company and includes training sessions tailored to the specific needs of teams and leaders, open discussion forums, and one-on-one meetings. These initiatives are all crafted with a singular goal: to generate value and contribute to our most important resource—our people.

VISITING THREE CONTINENTS AT ONCE

HAMBURG - GERMANY

Talleres Industriales is not just a company from Panama; we are a global enterprise headquartered in Panama. We regularly service over 20 countries across the Americas, and our technicians and engineers have been onboard vessels around the world solving problems.

Additionally, we make a point of visiting ship owners globally to maintain strong relationships and gather feedback, understanding their needs and staying abreast of market trends. Our customer-centric approach is fundamental, as trust with our clients is essential for the sustainability of our business model.

This month, three of our managers are engaging with clients across three different continents simultaneously. Santos Melgar, one of our managers, is currently visiting clients and strategic partners along the East Coast of the United States, including Connecticut and New York. He will then cross the Atlantic to meet with clients in London and Glasgow.

SINGAPORE

Meanwhile, our Commercial Manager, Juvencio Pizza, is in Hamburg attending the Maritime Forum and visiting local clients. Lastly, Carlos Tapia, the youngest member of our commercial team, is in Singapore, where many of our Asian clients have entrusted their vessels to Talleres.

CONNECTICUT - USA

TANK CLEANING PROJECTS AT ANCHORAGE

Last month, we undertook a significant project involving cleaning five onboard tanks at a client's request.

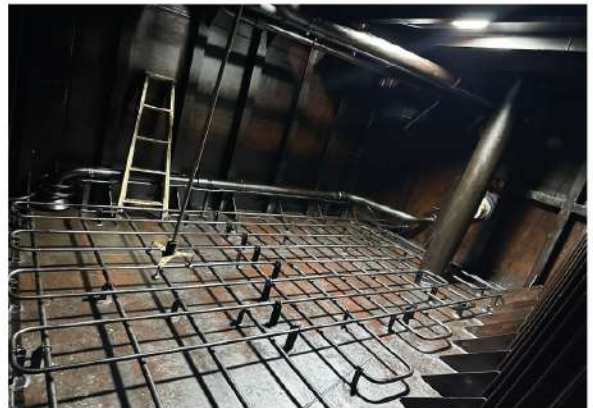

As a certified pollution control company, Talleres Industriales deployed a team of a dozen skilled cleaners to manage this critical task.

Equipped with essential safety gear-goggles, helmets, half-face masks, flashlights, and gloves-our team worked diligently over five days to clean the tanks according to the client's stringent requirements.

The tanks contained Heavy Fuel Oil (HFO), often leaving solid residues behind. Although this type of fuel is typically processed through onboard purification equipment, periodic tank cleaning is crucial to maintain fuel quality for the engines.

Our cleaning process began with the pumping out of the liquid fuel, followed by the removal of solid residues accumulated at the bottom of the tanks. Upon completion of the cleaning, we assisted the client in verifying the fuel's quality. This step is vital to prevent potential engine problems caused by residual particles entering the engine system.

PHASED ARRAY – TISA LIFEBOAT & NDT – NEW SERVICES

Phased Array Ultrasonic Testing (PAUT) has become an indispensable tool in the field of non-destructive testing (NDT) for on-board vessel inspections. This advanced ultrasonic testing technique utilizes multiple ultrasonic elements and electronic time delays to create beams that can be steered, scanned, swept, and focused electronically from a fixed probe position.

This capability allows for detailed imaging of a testing area, providing precise measurements of crack sizes, positions, and orientations, which are crucial for assessing the structural integrity of ship hulls, tanks, and other critical components. PAUT is particularly valued for its ability to rapidly scan large areas and its versatility in accessing hard-to-reach sections, making it ideal for in-service inspections that minimize downtime and operational disruptions.

The application of PAUT in the maritime industry not only enhances the detection of flaws and irregularities but also significantly improves safety and operational efficiency. Tisa Lifeboat & NDT keeps investing in the latest technology for the shipping industry.

MARINE SOLUTIONS – RENTAL OF POWER PACKS

Talleres Industriales' power pack rental division in the Panama Canal area provides a comprehensive solution for vessels requiring auxiliary power, operating with a fleet of over 12 class-approved power packs available 24/7 ranging from 400 kw to 1000 kw.

This extensive inventory ensures that there is always equipment ready to meet the demands of any vessel, especially during critical transits or when onboard generators require maintenance.

The division not only offers power packs but also includes tank containers, reefer plug panels, and class-approved cables, all certified for maritime use. These components are essential for maintaining the integrity of temperature-sensitive cargo and ensuring that operational systems are continuously powered without interruption.

The service is designed for efficiency and safety, enabling the seamless synchronization of Talleres Industriales' power packs with a vessel's existing generators to create a robust parallel power system. This capability is crucial for ensuring that both cargo and vessel operations are maintained without risk of damage or loss.
